

How do I add a custom domain to my Website Builder plan?

- 2023-01-04 - Website Builder

You can easily connect your Website Builder plan with a domain you have registered with Papaki or another registrar, by following the steps below.

Step 1. Log in your Control Panel at Papaki

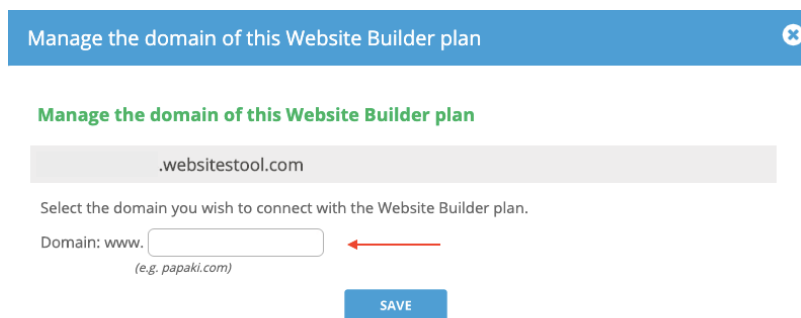

[Log in your Control panel](#) at Papaki and go to your Website Builder plan. Then, click on "Edit" under the domain name.

The screenshot shows the Papaki control panel interface. On the left, there is a blue box with the text "Image queued" and "Αναμονή εικόνας" (Waiting for image) along with the Papaki logo. The main area displays the details of a Website Builder plan. The "Domain" section shows ".websitestool.com" with an "(Edit)" link next to it, which is highlighted by a red arrow. Other sections include "Plan Type" (Free), "Your plan's nameservers are" (Primary: dns1.papaki.gr, Secondary: dns2.papaki.gr), "Plan Features" (1 GB Disk Space, 1 website), "Welcome Email" (Resend Email), and "Auto Renew" (Inactive).

Step 2. Insert a domain name

Insert the domain you want to connect with your Website Builder plan and click save.

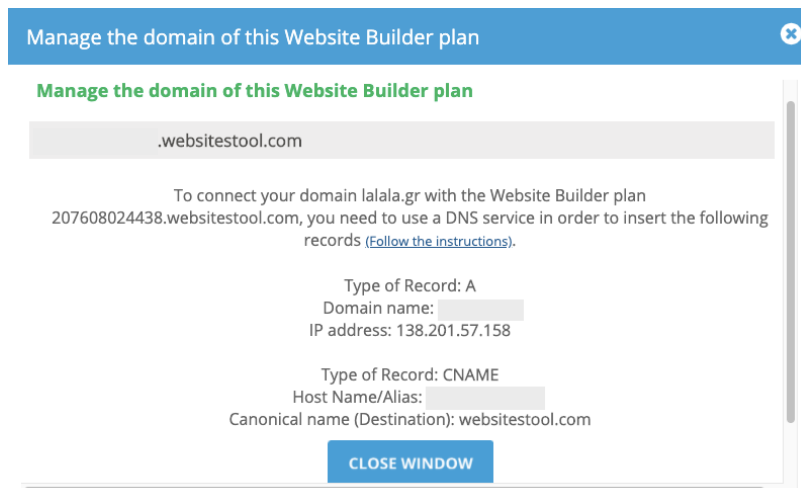

The screenshot shows a form titled "Manage the domain of this Website Builder plan". At the top, it says ".websitestool.com". Below this, it says "Select the domain you wish to connect with the Website Builder plan." There is a text input field labeled "Domain: www." with a red arrow pointing to it. Below the input field, there is a small example "(e.g. papaki.com)". At the bottom right of the form, there is a blue "SAVE" button.

To complete the process you need to create a CNAME record for your domain, through a DNS hosting service.

Depending on the case, you will see the option to complete the process automatically (image 1) by clicking on the green button "Connect Domain", or manually by creating on your own the DNS Records, via a DNS Hosting service.

[Follow the step by step instructions to do it manually.](#)

The screenshot shows the same form as before, but with additional instructions. It says "To connect your domain lalala.gr with the Website Builder plan 207608024438.websitestool.com, you need to use a DNS service in order to insert the following records (Follow the instructions)." Below this, there are two sections for DNS records. The first section is for a Type of Record: A, with a Domain name field and an IP address: 138.201.57.158. The second section is for a Type of Record: CNAME, with a Host Name/Alias field and a Canonical name (Destination): websitestool.com. At the bottom right, there is a blue "CLOSE WINDOW" button.
