

How do I add a custom domain to my Website Builder plan?

- 2023-01-04 - Website Builder

You can easily connect your Website Builder plan with a domain you have registered with Papaki or another registrar, by following the steps below.

Step 1. Log in your Control Panel at Papaki

[Log in your Control panel](#) at Papaki and go to your Website Builder plan. Then, click on "Edit" under the domain name.

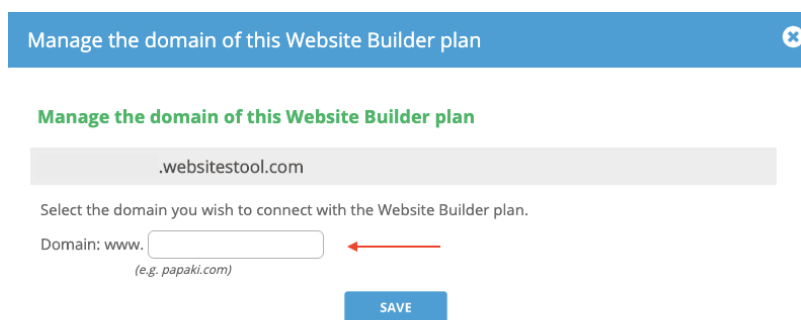

The screenshot shows a control panel interface. On the left, there is a blue notification box that says "Image queued" and "Αναμονή εικόνας" with the Papaki logo. The main content area is divided into several sections:

- Plan Type:** Free (Change)
- Domain:** .websitestool.com (Edit)
- Your plan's nameservers are:**
 - Primary Name Server: dns1.papaki.gr
 - Secondary Name Server: dns2.papaki.gr
 - Primary NS IP Address: 78.46.65.247
 - Secondary NS IP Address: 78.47.81.153
- Plan Features:** 1 GB Disk Space, 1 website
- Welcome Email:** Resend Email
- Auto Renew:** Inactive

Step 2. Insert a domain name

Insert the domain you want to connect with your Website Builder plan and click save.

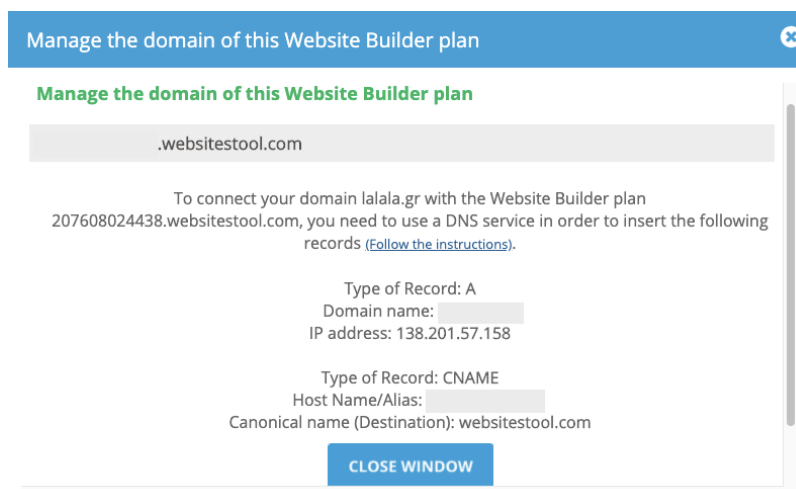

The screenshot shows a dialog box titled "Manage the domain of this Website Builder plan". It contains a text input field with ".websitestool.com" entered. Below this, there is a prompt: "Select the domain you wish to connect with the Website Builder plan." followed by a "Domain: www." label and an empty input field. A red arrow points to this input field. Below the input field is the example "(e.g. papaki.com)". At the bottom right of the dialog is a blue "SAVE" button.

To complete the process you need to create a CNAME record for your domain, through a DNS hosting service.

Depending on the case, you will see the option to complete the process automatically (image 1) by clicking on the green button "Connect Domain", or manually by creating on your own the DNS Records, via a DNS Hosting service.

[Follow the step by step instructions to do it manually.](#)

The screenshot shows a dialog box titled "Manage the domain of this Website Builder plan". It contains a text input field with ".websitestool.com" entered. Below this, there is a prompt: "To connect your domain lalala.gr with the Website Builder plan 207608024438.websitestool.com, you need to use a DNS service in order to insert the following records (Follow the instructions)."

Below the prompt, there are two sets of DNS record information:

- Type of Record: A
Domain name: [input field]
IP address: 138.201.157.158
- Type of Record: CNAME
Host Name/Alias: [input field]
Canonical name (Destination): websitestool.com

At the bottom of the dialog is a blue "CLOSE WINDOW" button.
