

In what format has the Reseller API been developed?

- 2022-12-15 - Domain Resellers

Our Reseller API for searching/registering domain names, has been developed in JSON format. JSON (JavaScript Object Notation) is based on JavaScript and uses the same syntax for creating objects, strings etc. JSON 's great advantages are: 1) it does not depend on the programming language that you are using when developing code, 2) it describes the functions being used. Therefore, it is easier for you to comprehend, embed, change and extend the code that we provide according to your own needs.
